This listing of the claims will replace all prior versions and listings of claims in the application:

Listing of the claims:

Claims 1-2 (canceled)

Claim 3 (currently amended): A method for diagnosing the presence of breast cancer in a patient comprising:

- (a) determining levels of a <u>breast specific gene (BSG)</u> of claim 1 in cells, tissues or bodily fluids in a patient; and
- (b) comparing the determined levels of BSG with levels of BSG in cells, tissues or bodily fluids from a normal human control, wherein a change in determined levels of BSG in said patient versus normal human control is associated with the presence of breast cancer, wherein the BSG comprises a polynucleotide of SEO ID NO:4, a polynucleotide encoding the same polypeptide as encoded by SEO ID NO:4 or a protein encoded thereby.

Claim 4 (currently amended): A method of diagnosing metastases of breast cancer in a patient comprising:

- (a) identifying a patient having breast cancer that is not known to have metastasized;
- (b) determining levels of a <u>breast specific gene (BSG)</u> of claim 1 in a sample of cells, tissues, or bodily fluid from said

patient; and

(c) comparing the determined BSG levels with levels of BSG in cells, tissue, or bodily fluid of a normal human control, wherein an increase in determined BSG levels in the patient versus the normal human control is associated with a cancer which has metastasized, wherein the BSG comprises a polynucleotide of SEO ID NO:4, a polynucleotide encoding the same polypeptide as encoded by SEO ID NO:4 or a protein encoded thereby.

Claim 5 (currently amended): A method of staging breast cancer in a patient having breast cancer comprising:

- (a) identifying a patient having breast cancer;
- (b) determining levels of a <u>breast specific gene (BSG)</u> of claim 1 in a sample of cells, tissue, or bodily fluid from said patient; and
- (c) comparing determined BSG levels with levels of BSG in cells, tissues, or bodily fluid of a normal human control, wherein an increase in determined BSG levels in said patient versus the normal human control is associated with a cancer which is progressing and a decrease in the determined BSG levels is associated with a cancer which is regressing or in remission, wherein the BSG comprises a polynucleotide of SEO ID NO:4, a polynucleotide encoding the same polypeptide as encoded by SEO ID

NO:4 or a protein encoded thereby.

Claim 6 (currently amended): A method of monitoring breast cancer in a patient for the onset of metastasis comprising:

- (a) identifying a patient having breast cancer that is not known to have metastasized;
- (b) periodically determining levels of a <u>breast specific gene</u>

 (BSG) of claim 1 in samples of cells, tissues, or bodily fluid from said patient; and
- (c) comparing the periodically determined BSG levels with levels of BSG in cells, tissues, or bodily fluid of a normal human control, wherein an increase in any one of the periodically determined BSG levels in the patient versus the normal human control is associated with a cancer which has metastasized, wherein the BSG comprises a polynucleotide of SEO ID NO:4, a polynucleotide encoding the same polypeptide as encoded by SEO ID NO:4 or a protein encoded thereby.

Claim 7 (currently amended): A method of monitoring a change in stage of breast cancer in a patient comprising:

- (a) identifying a patient having breast cancer;
- (b) periodically determining levels of a <u>breast specific gene</u>
 (BSG) of claim 1 in cells, tissues, or bodily fluid from said patient; and

(c) comparing the periodically determined BSG levels with levels of BSG in cells, tissues, or bodily fluid of a normal human control, wherein an increase in any one of the periodically determined BSG levels in the patient versus the normal human control is associated with a cancer which is progressing in stage and a decrease is associated with a cancer which is regressing in stage or in remission, wherein the BSG comprises a polynucleotide of SEO ID NO:4, a polynucleotide encoding the same polypeptide as encoded by SEO ID NO:4 or a protein encoded thereby.

Claims 8-15 (canceled)
